

VIRA GEL : HC

Herpes Healing Formula

DESCRIPTON:

VIRA GEL:HC is a natural anti-viral & bacterial treatment that speeds up healing and recovery time of viral outbreaks such as HSV-1, HSV-2, and Herpes Zoster. It can effectively be used topically or orally for cold sores, genital herpes, shingles and other viral rashes. Some patients report relief after one to two applications with greatly reduced overall healing times. VIRA GEL:HC contains 2-DG, one of the most effective treatments known to assist with anti-viral and antibiotic treatment of auto-immune disease such Epstein-Barr and AIDS/HIV related herpes symptoms.

BENEFITS:

- Dramatically speeds up healing and recovery time of viral outbreaks.
- Economical when compared to prescription drugs while being even more effective.
- Has no uncomfortable side effects such as skin irritation or pain with application.
- Application is safe and easy as a clear gel that provides a cooling sensation with immediate relief.
- A natural organic extract that starves the virus to elimination with no side effects.
- The only therapeutic treatment exclusively targeting the eradication of herpes outbreaks. It is proven to treat herpes virus in a gentle, non-toxic way.

WHAT IS HERPES?:

Herpes is a viral issue. The herpes simplex virus (HSV) is the cause of herpes. There are two types of herpes simplex viruses:

- (1) **Herpes simplex virus type 1 (HSV-1)**, the most common, usually associated with infections of the lips, mouth and face resulting in lesions such as cold sores or fever blisters, transmitted by contact with infected saliva.
- (2) **Herpes simplex virus 2 (HSV-2)** is sexually transmitted and is associated with genital ulcers or sores. Individuals may harbor HSV-2 but display no obvious symptoms. Ninety percent (90%) are unaware they have the virus. It is estimated that a large majority of people will at some point experience oral or genital herpes. Approximately 50% - 80% of the adult population in the U.S. have oral herpes and one in every five adults have genital herpes.

The Herpes Simplex Virus enters the living cell to begin its biological activity. The Herpes virus must invade the host cell in a complex process called the "Viral Replication Cycle". Rapid replication (reproduction) occurs when the herpes virus comes out of its dormant stage and causes an outbreak. This replication is what causes the herpes virus to overpower the body's defenses and create sores and blisters on the skin's surface.

EFFICACY: HOW IT WORKS

VIRA GEL:HC contains the Active Ingredient P2-DG (**2DG-PH 2-Deoxy-D-Glucose**), a structure analogous to glucose of natural organic origin. **VIRA GEL: HC** treats the problem at its source rather than simply treating the symptoms by eliminating the chance for a virus to live and assemble. The key link in this process is the use of enzymes that viruses use to reproduce. VIRA GEL:HC disables this link, thus preventing the reproduction of the virus causing the symptoms to quickly dissipate.

When VIRA GEL:HC is applied to the herpes lesions, blisters and sores, results begin immediately and healing time is reduced from days to hours. It is not only well tolerated by genital skin tissue and is almost completely devoid of toxicity, the key ingredient in the product is used in other skin care products. There is very little potential for skin irritation to occur from daily use. Because it is a natural organic extract it does not cause side effects such as skin irritation or pain when applied; an extremely important fact when treating sensitive parts of the body. VIRA GEL:HC is the only treatment exclusively targeting the eradication of genital herpes outbreaks and is safe and non-irritating to genital tissue. VIRA GEL:HC has successfully helped thousands of people overcome herpes and many thousands more to dramatically reduce the frequency and intensity of their condition.

HERPES TREATMENTS COMPARED:

Although there is no cure for herpes, there are different methods for healing the outbreaks once they occur. These include prescription medications and natural remedies such as L-Lysine, Vitamin C, Zinc, Cats Claw, St. John's Wort and many others. These products contain ingredients which can sting and further irritate the infected area or attempt to "numb" but are only partially effective and can lead to allergic reactions. Experts strongly advise against using topical cortisone-type creams as this can suppress immunity and may worsen outbreaks significantly.

In contrast, VIRA GEL:HC works to starve the virus out of existence on contact without causing damage to the host cell, providing the safest means of putting an end to the virus cycle. Many antiviral remedies are on the market touting their efficacy against the herpes virus with multiple ingredients but the scientific fact is nothing has been proven more effective than VIRA GEL:HC in comprehensive recovery.

CONTRA-INDICATIONS AND SIDE EFFECTS: None.

INGREDIENTS: Organic Whole Leaf Aloe Vera Gel, P-2DG (5%) and Natural Vitamin E

Manufactured in China in a cGMP environment.
